SORTING SYSTEM

VARISORT COMPACT

Multi-sensor sorting system for the recycling industry:
Overcoming challenging or almost impossible sorting tasks

SORTING SYSTEM

VARISORT COMPACT

Multi-sensor sorting system for the recycling industry:
Overcoming challenging or almost impossible sorting tasks

VARISORT COMPACT is especially developed for the sorting of three-dimensional materials and for e-waste. The unique feature is the combination of an infeed chute and a conveyor belt. This enables the elimination of shape, weight and friction influences.

Compact design with minimal space requirements and corresponding mobility.

Your advantages

- Universally applicable in plastic, metal and electronic waste processing
- Reliable detection and separation
- Ensures the purity of the end product
- Customer and product-oriented solutions through modular design

Efficient

High throughput of up to 4 t/h and a reject reliability of up to 99%.

Flexible

Combination of up to three sensors and different working widths.

Profitable

High system availability with low maintenance and cleaning requirements.
